CONTROL PANEL KITS

Custom Designed

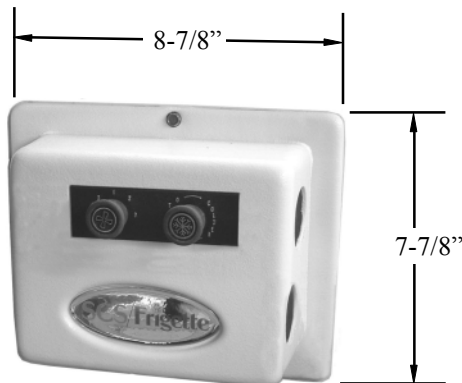

Frigette's control panels are extremely user-friendly, easy to install, rugged, and adaptable to a variety of different bus configurations. Every installation involving one or more of Frigette's EV-series ceiling mounted evaporators will require one of these kits. Consider these advantages:

User Friendly - Each EV-series evaporator is provided its own three-speed blower control switch. Each complete system (one or two evaporators, one condenser and one compressor) is provided an adjustable thermostat; the thermostat senses cabin temperature and permits fine tuning for passenger comfort. Knobs for the blower and thermostat are large, soft-coated and easy to locate without taking your eyes off of the road.

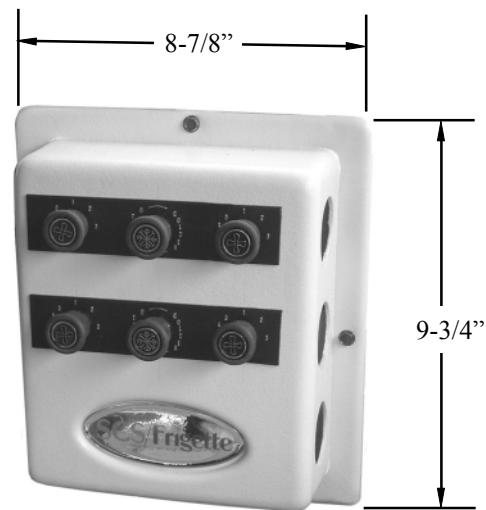

Easy to Install - Each control panel mounts with four screws. All that is required is a flat surface that will accommodate the panel (see dimensional data below). Call Frigette for applications where space is a problem.

Rugged - Designed for years of use, each panel is molded from high-impact ABS plastic. Control components are simple and rugged and have a long history of dependability, in the mobile A/C industry. When replacement is required, the parts are readily available and extremely easy to service.

Adaptable - Frigette's control panels will fit most busses so long as sufficient space is available on either a horizontal or vertical surface. The panels are molded in a light beige color and blend easily with most bus interiors.
